CLAIM AMENDMENTS

Claims 1-20 are pending. Claims 1, 13 and 17 have been amended. Claim 8 has been canceled.

1. (Currently Amended) A method for controlling network digital broadcasting service, comprising steps of:

1

directly requesting, at a client, a digital broadcasting server for a session connection, and establishing a session by receiving a confirmation message for the session connection from the digital broadcasting server; and

directly requesting, at the client, the digital broadcasting server for a channel change, and changing a channel by receiving a confirmation message for confirming the channel change from the digital broadcasting server,

wherein a message for requesting the channel change and the confirmation message for confirming the channel change each include a DSM-CC (Digital Storage Media-Command and Control) message header field, the message for requesting the channel change is a ProgramSelectRequest message including: the DSM-CC (Digital Storage Media-Command and Control) message header field, a Session ID (Identification) field, a STB (Set Top Box) status field, a broadcast ProgramId field, and a Client ID field, and the ProgramSelectRequest message is transmitted from the client to the digital broadcasting server.

2. (Original) The method according to claim 1, further comprising:

receiving, at the client, a message for checking a status of the client from the digital

- broadcasting server, and directly delivering a confirmation message for checking the status of the client to the digital broadcasting server.
 - 3. (Original) The method according to claim 1, further comprising:

directly requesting, at the client, the digital broadcasting server for a session termination and terminating a session by receiving a confirmation message for the session termination from the digital broadcasting server.

4. (Original) The method according to claim 1, further comprising:

directly requesting, at the digital broadcasting server, the client for a session termination and terminating a session by receiving a confirmation message for the session termination from the client.

- 5. (Original) The method according to claim 1, further comprising the step of directly receiving, at the client, a session termination request from the digital broadcasting server, and terminating a session if the client cannot transmit a response to the session termination request from the digital broadcasting server.
- 6. (Original) The method according to claim 1, wherein a protocol between the client and the digital broadcasting server is a TCP/IP (Transmission Control Protocol/Internet Protocol).
 - 7. (Original) The method according to claim 1, wherein a message for requesting the session

- connection is a SessionSetupRequest message including: a DSM-CC (Digital Storage 2 Media-Command and Control) message header field, a Session ID (Identification) field, a Reserved 3 field, a Client ID field, and a Server ID field, and the SessionSetupRequest message is transmitted 4 from the client to the digital broadcasting server.
 - 8. (Canceled)

- 9. (Original) The method according to claim 2, wherein the message for checking the status of the client is a ServerStatusRequest message including: a DSM-CC (Digital Storage Media-Command and Control) message header field, a Reason field, a statusType field, a resourceNumber field for showing a number of a resource whose status is wanted to be known, a Reserved field, and a client ID field, and the ServerStatusRequest message is transmitted from the digital broadcasting server to the client.
- 10. (Original) The method according to claim 3, wherein a message for requesting a session termination is a ClientReleaseRequest message including: a DSM-CC (Digital Storage Media-Command and Control) message header field, a session ID field, a Reason field, and a ClientID field, and the ClientReleaseRequest message is transmitted from the client to the digital broadcasting server.
- 11. (Original) The method according to claim 4, wherein a message for requesting a session termination is a ServerReleaseRequest message including: a DSM-CC (Digital Storage

Media-Command and Control) message header field, a session ID field, a Reason field, and a
ClientID field, and the ServerReleaseRequest message is transmitted from the digital broadcasting
server to the client.

- 12. (Original) The method according to claim 1, wherein the confirmation message for confirming the session connection is a SessionSetupConfirm message including: a DSM-CC (Digital Storage Media-Command and Control) message header field, a Session ID (Identification) field, a response field, and a Server ID field, and the SessionSetupConfirm message is transmitted from the digital broadcasting server to the client.
- 13. (Currently Amended) The method according to claim 1, wherein A method for controlling network digital broadcasting service, comprising steps of:

directly requesting, at a client, a digital broadcasting server for a session connection, and establishing a session by receiving a confirmation message for the session connection from the digital broadcasting server; and

directly requesting, at the client, the digital broadcasting server for a channel change, and changing a channel by receiving a confirmation message for confirming the channel change from the digital broadcasting server,

wherein a message for requesting the channel change and the confirmation message for confirming the channel change each include a DSM-CC (Digital Storage Media-Command and Control) message header field, the confirmation message for confirming the channel change is a ProgramSelectConfirm message including: the DSM-CC (Digital Storage Media-Command and

Control) message header field, a Session ID (Identification) field, a response field, a broadcast

ProgramId field, and a Client ID field, and the ProgramSelectConfirm message is transmitted from
the digital broadcasting server to the client.

- 14. (Original) The method according to claim 2, wherein the confirmation message for confirming the status of the client is a ServerStatusConfirm message including: a DSM-CC (Digital Storage Media-Command and Control) message header field, a Response field, a statusType field, a resourceNumber field for showing a number of a resource whose status is wanted to be known, a resourceStatus field, and a client ID field, and the ServerStatusConfirm message is transmitted from the client to the digital broadcasting server for confirming the status of the client.
- 15. (Original) The method according to claim 3, wherein the confirmation message for confirming a session termination is a ClientReleaseConfirm message including: a DSM-CC (Digital Storage Media-Command and Control) message header field, a session ID field, a response field, and a ClientID field, and the ClientReleaseConfirm message is transmitted from the digital broadcasting server to the client.
- 16. (Original) The method according to claim 4, wherein the confirmation message for confirming a session termination is a ServerReleaseConfirm message including: a DSM-CC (Digital Storage Media-Command and Control) message header field, a session ID field, a response field, and a ClientID field, and the ServerReleaseConfirm message is transmitted from the client to the digital broadcasting server.

17. (Currently Amended) A system controlling a network digital broadcasting service comprises:

a client and a digital broadcasting server, the client directly requesting the digital broadcasting server for a session connection, and establishing a session by receiving a confirmation message for the session connection from the digital broadcasting server; and

the client directly requesting a program change from the digital broadcasting server and receiving a confirmation message from the digital broadcasting server, when the digital broadcasting server confirms the program change,

wherein a message requesting the program change and the confirmation message confirming the program change each include a DSM-CC (Digital Storage Media-Command and Control) message header field, the message for requesting the program change is a ProgramSelectRequest message including: the DSM-CC (Digital Storage Media-Command and Control) message header field, a Session ID (Identification) field, a STB (Set Top Box) status field, a broadcast ProgramId field, and a Client ID field, and the ProgramSelectRequest message is transmitted from the client to the digital broadcasting server.

18. (Original) The system according to claim 17, further comprising:

the client periodically receiving a message from the digital broadcasting server for checking a status of the client, and directly delivering a client status confirmation message, indicative of the status of the client, to the digital broadcasting server.

19. (Original) The system according to claim 17, further comprising:

1

2

3

4

1

2

3

4

the client directly requesting the digital broadcasting server for a session termination and terminating a session by receiving a confirmation message for the session termination from the digital broadcasting server.

20. (Original) The system according to claim 17, further comprising:

the digital broadcasting server directly requesting the client for a session termination and terminating a session by receiving a confirmation message for the session termination from the client.
